

Module 1 Structure

Goal of Module 1

In this module, students learn the following:

1. Build a REST API using PHP and MySQL
2. Connect a JavaScript frontend to the API
3. Run PHP behind NGINX
4. Add session- and token-based security

Module 1 Components

Project 1 (10% of the final grade)

Students implement a REST API Server using PHP and MySQL database.

1. The Server is written in PHP.
2. The server uses a MySQL database.
3. The server provides REST API services.
4. The server supports secure access.
5. The server includes an NGINX-based deployment configuration.

Homework 2 and Homework 3 (3% each)

- HW2 prepares students to plan and begin Project 1.
- HW3 reviews Module 1 using the questions in the `questions` directory.
 - Use VSCode/Marp to read questions and answer them.

Midterm 1 (20% of the final grade)

Most midterm questions are modifications of HW3.

Raw Canvas point totals may differ from these percentages because the course uses weighted grading categories. Canvas is the official source for grades and deadlines.

Module 1 — PHP REST API Foundations

One application, developed one layer at a time

Module 1 assessments

Canvas is the official source for deadlines and weighted grades.
